✅ Definition of Ready and Done

Definition of Ready and Done

Working agreements for the simulated DeliverEats Scrum team. This is a simulated portfolio project.

Definition of Ready (a story can enter a sprint when)

- It is written as "As a … I want … so that …".
- It has acceptance criteria in Given/When/Then form.
- It is traced to a BR, FR and use case through labels.
- It has a priority and a story point estimate.
- It is small enough to finish within one sprint.
- Dependencies (for example the payment gateway or OTP SMS provider) are identified.

Definition of Done (a story is Done when)

1. All acceptance criteria are met.
2. The linked UAT scenario (for example UAT-06 for DE-18) passes.
3. Business rules named on the story (for example RULE-02) are respected.
4. The non-functional requirements below are met where they apply.
5. No open defects remain on the story.
6. The Product Owner has reviewed and accepted it.
7. Traceability labels and status in Jira are up to date.

How the non-functional requirements apply

NFR	Requirement	Where it is checked
NFR-01	Respond to user actions within 2 seconds under normal load	Every story with a user-facing action
NFR-02	At least 99.5% availability per calendar month	Release readiness, not per story
NFR-03	Intuitive navigation for all user roles	UI stories, reviewed against the wireframes

NFR-04	Encrypted in transit and at rest; salted password hashes	DE-11 , DE-13 and any story handling sensitive data
NFR-05	Modular, deployable with minimal disruption	Release readiness
NFR-06	Scales to 5x users after the MVP	Release readiness
NFR-07	Supports Android 10 and above	All app stories
NFR-08	Daily backup; recovery within 2 hours	Release readiness
NFR-09	No card or UPI credentials stored by DeliverEats	DE-16, DE-17, DE-18, DE-19

NFRs are kept here, not as separate stories, so each story stays focused on one user outcome.
